

BauderDIAMANT

Root-resistant, high-quality capping sheet –
without the use of root protection agents

- ☐ Root-resistance according to the FLL* without the use of root protection agents
- ☐ Excellent thermal stability up to 150°C
- ☐ High resistant strength
- ☐ Charcoal grey surface
- ☐ Coordinated in the Bauder system

BauderDIAMANT

Safe. Hard. Innovative.

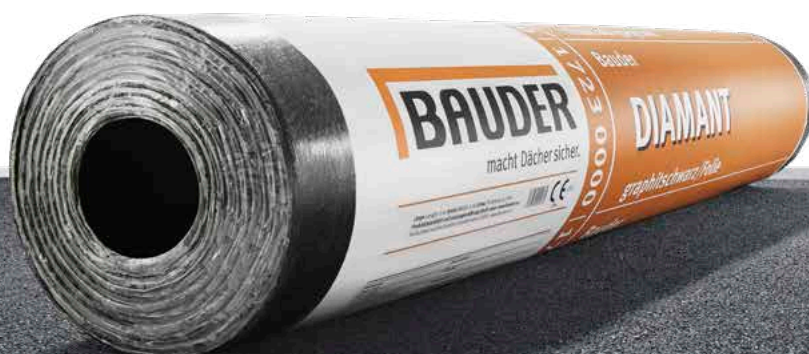

Roof planting indeed, but have you also thought about the right capping sheet? Then our BauderDIAMANT is the ideal base for the green roof. It is an innovative and root-resistant capping sheet, which previously did not exist. BauderDIAMANT is installed in our high-quality, root-resistant polymer bitumen torch-on membranes.

A unique, root-resistant capping sheet! **What makes BauderDIAMANT so special?**

In short: It's as "hard as a diamond". Diamonds are not only among the most precious, but also the hardest gems in the world, which is why the name says it all. BauderDIAMANT is so hard that no root on the green roof can find its way through the roofing and yet it is easy to install. Equipped with an innovative mass concept, the capping sheet offers a natural barrier

(according to the guidelines issued by the FLL* – the German Landscape Research, Development and Construction Society) without the use of root protection agents. BauderDIAMANT has been adapted to the changing weather conditions and can withstand even the highest temperatures. "Slippage of the surface layer", for example, in the pitched area and attic area is therefore almost impossible.

BauderDIAMANT

Coordinated in the system

BauderDIAMANT – the perfect addition to the system Bauder offers you the ideal roof build-up with reliable and proven systems. From the vapour barrier to the photovoltaic system, you get everything from a single source. With the new BauderDIAMANT, we are setting new standards for green roofs and therefore offering perfectly coordinated products on the roof.
